

UPGRADING CELLULAR TELEPHONES

Abstract of the Disclosure

5 A cellular telephone may be equipped with a
compartment that slidingly receives upgrade modules, such
as PC or memory cards. The modules may provide added
functionality, such as wireless Ethernet connection,
additional memory, pre-programmed memory, additional
processing, better displays, and the like. By simply
unplugging an existing card from its compartment and
10 inserting in its place a new card, upgraded features may be
pluggingly provided to cellular telephones.
